

Business Insights

Apple Financial Performance Dashboard

Revenue increased from approximately **\$19.3B (FY2006)** to **\$416.2B (FY2025)**, demonstrating sustained long-term growth. Net Profit Margin reached approximately **26.9%** in FY2025, reflecting strong profitability. Free Cash Flow exceeded **\$124B**, indicating excellent cash generation. Cash Conversion Ratio remained close to **100%**, showing efficient conversion of accounting profit into operating cash flow. Financial analysis highlighted periods of revenue slowdown as well as improvements in profitability over time.

Multi-Company Financial Performance Dashboard

Compared the financial performance of Apple, Microsoft, and NVIDIA using standardized KPIs. Benchmarked Revenue, Net Income, Profit Margin, Gross Margin, Free Cash Flow, Liquidity, and Capital Structure. Enabled side-by-side comparison to identify strengths and trends across leading technology companies. Interactive filters allow users to explore company-specific performance and financial health.

Business Value

This project demonstrates an end-to-end analytics workflow including API integration, data extraction, Python-based transformation, KPI calculation, Power BI dashboard development, and business storytelling to support financial decision-making.
